

Agraferm GmbH is one of the few full-service providers of agricultural and industrial biogas plants. In addition to the planning and construction of biogas plants, its range of services includes technical and biological maintenance for both its own and third-party plants.

Our wholly-owned subsidiary, BTA International GmbH, has been one of the most competent providers of processing and fermentation technology for 40 years, and its concepts are used in waste management facilities worldwide.

From April 2026, we are looking for students (m/f/d) for practical semesters for the following position:

**Students in their practical semester (m/f/d)
to support the commissioning process**

Your Tasks:

You will first spend several weeks preparing at our Pfaffenhofen location, followed by the practical part of your training on-site **in Spain (near Barcelona)**.

There, you will support our commissioning engineers and analyse the performance indicators of the biogas plant and its individual components.

We welcome applications from students of process engineering, environmental engineering, physical chemistry, or related fields who are interested in environmentally friendly technologies and have a practical aptitude.

Your Profile:

We are seeking aspiring engineers specializing in mechanical engineering, process engineering, or environmental engineering. Prior technical training is advantageous. Conversational English skills are required, and good Spanish skills are a plus.

We offer a varied and responsible role within a highly motivated and friendly team, along with excellent career development opportunities in a dynamic and future-oriented market. For our employees who travel frequently, we offer attractive expense allowances and overtime accounts. We are a modern, family-friendly employer and therefore welcome applications from women and men with family responsibilities. The advertised position involves 60 - 90% travel time.

Please send us your complete and informative application documents by email.
